Notes, Cautions, and Warnings

Notes, cautions, and warning statements may be used in this document. They are listed in the order of increasing severity of potential hazards.

NOTE
A NOTE provides a tip, guidance, or advice, emphasizes important information, or provides a reference to related information.

ATTENTION
An ATTENTION statement indicates some information that you must read before continuing with the current action or task.

CAUTION
A CAUTION statement alerts you to situations that can be potentially hazardous to you or cause damage to hardware, firmware, software, or data.

DANGER
A DANGER statement indicates conditions or situations that can be potentially lethal or extremely hazardous to you. Safety labels are also attached directly to products to warn of these conditions or situations.
Command Syntax Conventions

Bold and italic text identify command syntax components. Delimiters and operators define groupings of parameters and their logical relationships.

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td><strong>bold text</strong></td>
<td>Identifies command names, keywords, and command options.</td>
</tr>
<tr>
<td><em>italic text</em></td>
<td>Identifies a variable.</td>
</tr>
<tr>
<td>[ ]</td>
<td>Syntax components displayed within square brackets are optional.</td>
</tr>
<tr>
<td>Default responses to system prompts are enclosed in square brackets.</td>
<td></td>
</tr>
<tr>
<td>{ x</td>
<td>y</td>
</tr>
<tr>
<td>x</td>
<td>y</td>
</tr>
<tr>
<td>&lt;&gt;</td>
<td>Nonprinting characters, for example, passwords, are enclosed in angle brackets.</td>
</tr>
<tr>
<td>...</td>
<td>Repeat the previous element, for example, member[member...].</td>
</tr>
<tr>
<td>\</td>
<td>Indicates a “soft” line break in command examples. If a backslash separates two lines of a command input, enter the entire command at the prompt without the backslash.</td>
</tr>
</tbody>
</table>

Document Feedback

Ruckus is interested in improving its documentation and welcomes your comments and suggestions.

You can email your comments to Ruckus at ruckus-docs@arris.com.

When contacting us, include the following information:

- Document title and release number
- Document part number (on the cover page)
- Page number (if appropriate)

For example:

- Ruckus SmartZone Upgrade Guide, Release 5.0
- Part number: 800-71850-001 Rev A
- Page 7

Ruckus Product Documentation Resources

Visit the Ruckus website to locate related documentation for your product and additional Ruckus resources.

Release Notes and other user documentation are available at https://support.ruckuswireless.com/documents. You can locate the documentation by product or perform a text search. Access to Release Notes requires an active support contract and a Ruckus Support Portal user account. Other technical documentation content is available without logging in to the Ruckus Support Portal.

White papers, data sheets, and other product documentation are available at https://www.ruckuswireless.com.
Online Training Resources
To access a variety of online Ruckus training modules, including free introductory courses to wireless networking essentials, site surveys, and Ruckus products, visit the Ruckus Training Portal at https://training.ruckuswireless.com.

Contacting Ruckus Customer Services and Support
The Customer Services and Support (CSS) organization is available to provide assistance to customers with active warranties on their Ruckus products, and customers and partners with active support contracts.

For product support information and details on contacting the Support Team, go directly to the Ruckus Support Portal using https://support.ruckuswireless.com, or go to https://www.ruckuswireless.com and select Support.

What Support Do I Need?
Technical issues are usually described in terms of priority (or severity). To determine if you need to call and open a case or access the self-service resources, use the following criteria:

- **Priority 1 (P1)—Critical.** Network or service is down and business is impacted. No known workaround. Go to the Open a Case section.
- **Priority 2 (P2)—High.** Network or service is impacted, but not down. Business impact may be high. Workaround may be available. Go to the Open a Case section.
- **Priority 3 (P3)—Medium.** Network or service is moderately impacted, but most business remains functional. Go to the Self-Service Resources section.
- **Priority 4 (P4)—Low.** Requests for information, product documentation, or product enhancements. Go to the Self-Service Resources section.

Open a Case
When your entire network is down (P1), or severely impacted (P2), call the appropriate telephone number listed below to get help:

- **Continental United States:** 1-855-782-5871
- **Canada:** 1-855-782-5871
- **Europe, Middle East, Africa, Central and South America, and Asia Pacific,** toll-free numbers are available at https://support.ruckuswireless.com/contact-us and Live Chat is also available.
- **Worldwide toll number for our support organization.** Phone charges will apply: +1-650-265-0903

We suggest that you keep a physical note of the appropriate support number in case you have an entire network outage.

Self-Service Resources
The Ruckus Support Portal at https://support.ruckuswireless.com offers a number of tools to help you to research and resolve problems with your Ruckus products, including:

- Technical Documentation—https://support.ruckuswireless.com/documents
Preface
Contacting Ruckus Customer Services and Support

• Community Forums—https://forums.ruckuswireless.com/ruckuswireless/categories
• Knowledge Base Articles—https://support.ruckuswireless.com/answers
• Software Downloads and Release Notes—https://support.ruckuswireless.com/#products_grid
• Security Bulletins—https://support.ruckuswireless.com/security

Using these resources will help you to resolve some issues, and will provide TAC with additional data from your troubleshooting analysis if you still require assistance through a support case or RMA. If you still require help, open and manage your case at https://support.ruckuswireless.com/case_management.
## Supported hardware and software

This document is applicable for the various Ruckus ICX 7150 Ethernet switch models. The following tables list the device models and rack mount kits supported.

### TABLE 2 OS-dependent models

<table>
<thead>
<tr>
<th>Model number</th>
<th>Short description</th>
<th>Introduced (OS)</th>
<th>Currently supported (OS)</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>ICX 7150-48ZP</td>
<td>Sixteen 2.5G and thirty-two 1G Copper ports with eight SFP+ 1G/10-GbE ports - four are optical stacking or uplink ports, and four are uplink ports only</td>
<td>Fastiron 08.0.61</td>
<td>Yes</td>
<td>hot-swap fan tray (up to 2 per switch) Mountable on a desktop, rack, or wall</td>
</tr>
<tr>
<td>ICX 7150-C12P</td>
<td>Twelve GbE (124 W) PoE+ ports with two 1-GbE uplink ports and two SFP+ 10-GbE optical stacking or uplink ports</td>
<td>Fastiron 08.0.60</td>
<td>Yes</td>
<td>Fanless Mountable on a desktop, rack, wall</td>
</tr>
<tr>
<td>ICX 7150-24</td>
<td>Twenty-four GbE non-PoE ports with two 1-GbE uplink ports and four SFP+ 10-GbE optical stacking or uplink ports</td>
<td>Fastiron 08.0.60</td>
<td>Yes</td>
<td>Fanless Mountable on a desktop, rack, or wall</td>
</tr>
<tr>
<td>ICX 7150-24P</td>
<td>Twenty-four GbE (370 W) PoE+ ports with two 1-GbE uplink ports and four SFP+ 10-GbE optical stacking or uplink ports</td>
<td>Fastiron 08.0.60</td>
<td>Yes</td>
<td>Two built-in fans Support fanless mode Mountable on a desktop, rack, or wall</td>
</tr>
<tr>
<td>ICX 7150-48</td>
<td>Forty-eight GbE non-PoE ports with two 1-GbE uplink ports and four SFP+ 10-GbE optical stacking or uplink ports</td>
<td>Fastiron 08.0.60</td>

- LRM Adapter support

Hardware features

The Ruckus ICX 7150 offers the following hardware features and capabilities:

- ICX 7150 Z-series new for this release have the following features:
  - 16 2.5G+ Copper ports, that support 100M/1G/2.5G operation.
  - 32 1G Copper ports, that support 10M/100M/1G operation.
  - 8 SFP+ Fiber Ports supporting 1G/10G operation, in which the first 4 ports can be configured as stacking ports and the last 4 ports can be used for uplink/user port.
  - The ports 1/2/1 and 1/2/3 come up in 10G speed by default.
  - The other ports come up in 1G speed default, enabling 10G on these ports requires a software license. The ports 1/2/1 through 1/2/4 can be configured as stacking port or as user/uplink ports, where as 1/2/5 through 1/2/8 can be configured as user/uplink ports.
  - The first 16 ports complies with the power-over-HDBase T and each port can provide up to 90W.
  - The 32 1G Copper ports complies with the IEEE 802.3af/at standard.

- The table below lists the ICX 7150 switch models with 12, 24, or 48 auto-negotiating 10/100/1000 Mbps full duplex Rj-45 ports that can be used for downlink. These ports reside on slot 1 of the switch and can be non-PoE, PoE/POE+, or PoE+ ports.

Device Overview
License options

- Two 10/100/1000Base-T full duplex RJ-45 ports that can be used as uplink data ports. These ports reside on slot 2 of the switch.
- Two or four SFP+ optical 10-Gbps full duplex ports that can be used as stacking or uplink data ports. These ports reside on slot 3 of the switch.
- 10-GbE SFP+ dongle for LRM optic (Now supported in this release and onwards).
- Switch Port Extender (PE) mode (not supported currently).
- Maximum two FRUs power supply units.
- Maximum two FRU fans for cooling the system with sides-to-back airflow.
- System LEDs
  - Power status
  - DIAG status
  - Master/Slave status
  - Cloud management status (not enabled currently).
  - Software update status (not enabled currently).
- Status mode LEDs
  - Port link status mode
  - Port speed status mode
  - PoE status mode
  - Member ID status mode
  - USB modes
- Management interfaces
  - Mode switch button
  - Reset button
  - Out-of-band (OOB) GbE management port
  - USB 2.0 general purpose Type-A port for file transfer with removable media (removable media not included with the device)
  - Type-C USB console port (Type-C USB cable not included with the device)
  - RS-232 console port with RJ-45 form factor (Rj-45 console cable not included with the device)

License options

The following table displays Ruckus ICX 7150 part number and license information available when upgrading to a licensed feature set. The licensed feature set includes the Premium Layer 3 license, and the Ports on Demand license. When upgrading to a licensed feature set, a Certificate of Entitlement (CoE) is shipped to you upon purchase of the license. The CoE is a “proof of purchase” for any features that have been purchased. The CoE is a .PDF certificate that has a unique serial number. One CoE is issued for each feature license that is purchased. Refer to the Ruckus FastIron Software Licensing Guide for more details.

Device management options

You can use the built-in management functions of the device to monitor the topology, port status, physical status, and other information that help you analyze the switch performance, and to accelerate system debugging. The device automatically performs power-on self-test (POST) each time it is turned on. Errors, if any, are recorded in the syslog messages.

You can manage the device using any of the management options listed in the following table.

LRM Adapter support

Some ICX switches do not support Long Reach Module (LRM) optics on 10G fiber ports. LRM adapter can connect to any 10G fiber ports of the ICX switch. It has two 10G fiber ports and both ports can be used at the same time.

The LRM Adapter is supported on all 10G fiber ports for all models of the ICX7150 Family of switches. Below is the front view of the LRM adapter and the SPF+ Optic module with copper pigtail.
FIGURE 11 LRM Adapter front view

   b. Amber on, Green off: Link down
   c. Amber off, Green on: Link Up
   d. Amber off, Green Blinking: Link activity

2. Panel Label

FIGURE 12 SPF+ Optic module with copper pigtail

NOTE
The LRM adapter is used to support LRM optics on the ICX7750, ICX7250 and ICX7150 switches. The ICX7450 support LRM optics natively.
Preparing for the Installation

- Safety precautions.......................................................................................................................................................21
- Facility requirements...................................................................................................................................................23
- Quick installation checklist.........................................................................................................................................24
- Shipping carton contents........................................................................................................................................... 26

Safety precautions

When using this product, observe all danger, caution, and attention notices in this manual. The safety notices are accompanied by symbols that represent the severity of the safety condition.

Refer to Cautions and Danger Notices at the end of this guide for translations of safety notices for this product.

General precautions

**DANGER**
*The procedures in this manual are for qualified service personnel.*

**DANGER**
*Before beginning the installation, see the precautions in “Power precautions.”*

**DANGER**
*The equipment ports are intra-building type and must not be directly connected to metallic outside plant (OSP) cable conductors.*

**CAUTION**
*Changes or modifications made to this device that are not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.*

**CAUTION**
*Make sure the airflow around the front, and back of the device is not restricted.*

**CAUTION**
*Never leave tools inside the chassis.*

**CAUTION**
*To protect the serial port from damage, keep the cover on the port when not in use.*

**CAUTION**
*Do not install the device in an environment where the operating ambient temperature might exceed 45°C (113°F).*
ESD precautions

DANGER
For safety reasons, the ESD wrist strap should contain a series 1 megaohm resistor.

CAUTION
Before plugging a cable into any port, be sure to discharge the voltage stored on the cable by touching the electrical contacts to ground surface.

CAUTION
Static electricity can damage the chassis and other electronic devices. To avoid damage, keep static-sensitive devices in their static-protective packages until you are ready to install them.

NOTE
Wear a wrist grounding strap connected to the chassis ground (if the device is plugged in) or to a bench ground.

Power precautions

DANGER
Make sure that the power source circuits are properly grounded.

DANGER
Make sure you use a power cord displaying the mark of the safety agency that defines the regulations for power cords in your country. The mark is your assurance that the power cord can be used safely with the device.

DANGER
To reduce the risk of electric shock, disconnect all power cords before servicing.

DANGER
Disconnect the power cord from all power sources to completely remove power from the device.

DANGER
To avoid high voltage shock, do not open the device while the power is on.

DANGER
Batteries used for RTC/NVRAM backup are not located in operator-access areas. There is a risk of explosion if a battery is replace by an incorrect type. Dispose of used components with batteries according to local ordinance and regulations.

CAUTION
Ensure that the device does not overload the power circuits, wiring, and over-current protection. To determine the possibility of overloading the supply circuits, add the ampere (amp) ratings of all devices installed on the same circuit as the device. Compare this total with the rating limit for the circuit. The maximum ampere ratings are usually printed on the devices near the input power connectors.
Lifting and weight-related precautions

DANGER
Use safe lifting practices when moving the product.

DANGER
Mount the devices you install in a rack as low as possible. Place the heaviest device at the bottom and progressively place lighter devices above.

DANGER
Make sure the rack housing the device is adequately secured to prevent it from becoming unstable or falling over.

CAUTION
Do not use the port cover tabs to lift the module. They are not designed to support the weight of the module, which can fall and be damaged.

Laser precautions

DANGER
All fiber-optic interfaces use Class 1 lasers.

DANGER
Use only optical transceivers that are qualified by Ruckus Wireless, Inc. and comply with the FDA Class 1 radiation performance requirements defined in 21 CFR Subchapter I, and with IEC 60825 and EN60825. Optical products that do not comply with these standards might emit light that is hazardous to the eyes.

Facility requirements

Before installing the device, be sure the following facilities requirements are met.

TABLE 9 Facility requirements

<table>
<thead>
<tr>
<th>Type</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>• The site should be accessible for installing, cabling, and maintaining the devices.</td>
</tr>
<tr>
<td></td>
<td>• Maintain the operating environment as specified in the Technical Specifications.</td>
</tr>
<tr>
<td></td>
<td>• Allow at least 7.62 cm (3 in.) of space between the front and the back of the device and walls or other obstructions for proper airflow.</td>
</tr>
<tr>
<td></td>
<td>• Allow at least 7.62 cm (3 in.) of space at the front and back of the device for the twisted-pair, fiber-optic, and power cabling.</td>
</tr>
<tr>
<td></td>
<td>• Allow the status LEDs to be clearly visible.</td>
</tr>
<tr>
<td></td>
<td>• Allow for the unit to be connected to a separate grounded power outlet that provides 100 to 240 VAC, 50/60 Hz, within 2 m (6.6 ft) of each device, and is powered from an independent circuit breaker. As with any equipment, a filter or surge suppressor is recommended.</td>
</tr>
<tr>
<td></td>
<td>• Allow for twisted-pair cables to be routed away from power lines, fluorescent lighting fixtures, and other sources of electrical interference, such as radios and transmitters.</td>
</tr>
</tbody>
</table>
TABLE 9 Facility requirements (continued)

<table>
<thead>
<tr>
<th>Type</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical</td>
<td>• Adequate supply circuit, line fusing, and wire size, as specified by the electrical rating on the switch nameplate</td>
</tr>
<tr>
<td></td>
<td>• Circuit protected by a circuit breaker and grounded in accordance with local electrical codes</td>
</tr>
<tr>
<td></td>
<td>Refer to the Technical Specifications at the end of this guide for complete power supply specifications.</td>
</tr>
<tr>
<td>Thermal</td>
<td>• A minimum airflow of 39.1 cubic meters/hour (23 cubic ft/min.) available in the immediate vicinity of the switch</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE</strong></td>
</tr>
<tr>
<td></td>
<td>Although this airflow may exceed the airflow maximum listed in the device Technical Specifications, the additional airflow is recommended to pressurize the inlet (cool isle) side of rack installations relative to the exhaust side to minimize recirculation of hot air back to the inlet side.</td>
</tr>
<tr>
<td></td>
<td>• Ambient air temperature not exceeding 45°C (113°F) while the switch is operating</td>
</tr>
<tr>
<td>Rack (when rack-mounted)</td>
<td>• One rack unit (1U) in a 48.3 cm (19-inch) rack</td>
</tr>
<tr>
<td></td>
<td>• All equipment in the rack grounded through a reliable branch circuit connection</td>
</tr>
<tr>
<td></td>
<td>• Additional weight of switch not to exceed the rack's weight limits</td>
</tr>
<tr>
<td></td>
<td>• Temperature: Because the temperature within a rack assembly may be higher than the ambient room temperature, check that the rack-environment temperature is within the specified operating temperature range.</td>
</tr>
<tr>
<td></td>
<td>• Airflow: Be sure that the airflow direction for all equipment in a rack is the same or consistent.</td>
</tr>
<tr>
<td></td>
<td>• Mechanical loading: Do not place any equipment on top of a rack-mounted unit.</td>
</tr>
<tr>
<td></td>
<td>• Rack secured to ensure stability in case of unexpected movement</td>
</tr>
<tr>
<td></td>
<td>• Circuit overloading: Be sure that the supply circuit to the rack assembly is not overloaded.</td>
</tr>
</tbody>
</table>

Quick installation checklist

The following checklist provides a high-level overview of the basic installation process from the planning stage to the point where the device comes online and is ready to be deployed. Completing all the tasks in the suggested order ensures successful installation. It is recommended that you print this checklist and take it to the installation site.

Pre-installation tasks

Review all installation requirements ahead of time as part of your site preparation. Careful planning and site preparation ensures seamless installation, especially when installing multiple devices.

TABLE 10 Installation prerequisites

</table>
| Customize the host name and chassis name. | • Use the `hostname` command to change the default host name and CLI prompt.  
• Use the `chassisname` command to change the default chassis name or ID. Refer to Customizing the host name and chassis name on page 80 for more information.                                                                 |           |
| Establish a connection to the out-of-band management port. | By establishing a connection to the out-of-band management port, you can complete the device configuration using an SSH session, Telnet, or management application, such as Brocade Network Advisor. Refer to Establishing a connection to the out-of-band management port on page 81. |           |
| Verify that the device operates correctly. | • Check the LEDs to verify operation of functional parts. Refer to Verifying the correct operation on page 81.  
• The following commands can be useful to establish an operational baseline for the device. Refer to the Ruckus FastIron Command Reference guide for more information on these commands:  
  - `show chassis`  
  - `show version`  
  - `show cpu`  
  - `show flash`  
  - `show files`  
  - `show run`  
  - `show boot-preference`  
  - `show configuration`  
  - `show running-config`  
  - `show logging` | |
| Back up the configuration. | Use the `write memory` command to replace the startup configuration with the running configuration. Refer to Backing up the running configuration on page 82 for more information.                                                                 |           |

### Shipping carton contents

Ruckus ICX 7150 devices ship with all of the following items included in the shipping carton. When unpacking the device, verify that the contents of the shipping carton is complete, if any items are missing, contact the place of purchase.

- The Ruckus ICX 7150 device
- An accessory kit containing the following items:
  - Rack mounting kit containing two L-shaped mounting brackets and two sets of eight sink-head screws (included only with 24-port and 48-port models)
  - Two-post rack kit containing four rack-mounting screws and four cage nuts (included only with 24-port and 48-port models)
  - Wall mounting kit containing two wall-mount screws and two plastic anchors (included only with ICX 7150-C12P)
  - Four rubber feet
  - One US AC power cord, shielded
  - One power cord retaining clip
  - One console cable (RJ45 to RJ45 cross-over)
  - One RJ45-to-DB9 adapter
  - China-RoHS Hazardous/Toxic Substance statement
  - Read Me First document
Mounting the Device

Mounting options
You can install the device in several ways:

- As a standalone unit on a flat surface, for example, a table top. Use the rubber feet included with the shipment to secure the device on the surface. No other equipment is required for desktop installation.
- Only ICX 7150-C12P compact device:
  - As a standalone unit using a magnet (ICX6400-C12-MGNT) on a rack or on any surface that is magnetic such as a metal desk or cabinet.
  - As a standalone unit under a fixed surface, under a desk, or under a shelf using the wall / under desk mount kit (ICX7000-C12-WMK) or two-post rack mount kit (ICX7000-C12-RMK).
  - As a standalone unit directly on a wall using two screws.
- As a standalone unit on a wall using the wall mounting brackets included with the shipment to secure the device on the wall. No other equipment is required for wall mount installation.
- In a two-post Telco rack: You will need a Universal Two-Post Rack Kit (ICX7000-RMK or ICX7000-C12-RMK) to install in a two-post telecommunications (Telco) rack.
- In a four-post EIA rack: You will need a Universal Four-Post Rack Kit (XBR-R000295) to install devices in EIA racks that are between L-13.7 to 81.28 cm deep (L-5.0 to 32.0 in.), where L is the chassis depth.

Precautions specific to mounting
The following precautions specifically apply to mounting the device.

DANGER
Use safe lifting practices when moving the product.

DANGER
Make sure the rack housing the device is adequately secured to prevent it from becoming unstable or falling over.
Mounting the Device
Mounting on a desktop or flat surface

DANGER
Mount the devices you install in a rack as low as possible. Place the heaviest device at the bottom and progressively place lighter devices above.

DANGER
This equipment is suitable for mounting on concrete or other noncombustible surfaces only.

CAUTION
Make sure the airflow around the front, and back of the device is not restricted.

CAUTION
Never leave tools inside the chassis.

CAUTION
Use the screws specified in the procedure. Using longer screws can damage the device.

CAUTION
The device must be turned off and disconnected from the fabric during this procedure.

Mounting on a desktop or flat surface
Complete the following steps to install the device on a desktop or other flat surface. The device you are installing might look different than the one in the following illustration.

NOTE
The hardware device illustrated in this procedure is only for reference and may not depict the actual device that you are installing.
FIGURE 13 Attaching the adhesive feet on a compact device

Mounting the Device
Mounting on a desktop or flat surface
Mounting the compact device with a magnet

CAUTION
Ensure that adequate ventilation is provided for the system. A 3 cm clearance is recommended above the device and 8 cm clearance is recommended on each side.

CAUTION
When magnet mounting a switch, do not install it in a position where it can easily become unstable and fall, causing injury or damage to the switch.

1. Attach the four adhesive feet to the bottom of the device. If installing multiple devices, attach the adhesive feet to each device.
2. Set the device on a flat desktop, table, or shelf near an AC power source. Make sure that adequate ventilation is provided for the system. A 7.62 cm (3 in.) clearance is recommended on each side.
3. If installing multiple devices, place each device squarely on top of the one below. If you have both compact devices and regular devices, place the regular devices at the bottom.
4. Power on the system.

FIGURE 14 Attaching the adhesive feet on a 24-port or 48-port device
Use the magnet-mount kit to mount the device on a metal wall or a metal surface, including underneath a metal desk. The magnet-mount kit is available for order separately from the device and consists of a single magnet sheet.

Before mounting the device to a metal surface using the magnet sheet, ensure that the following requirements are met:

- The magnet sheet is attached to the bottom panel of the device. Refer to Attaching the magnet sheet to the device on page 31.
- Ensure that the device is not installed more than 110 mm. above the floor.

Note the following important installation considerations before installing the device on a metal surface using the magnet mount:

- The strength of the magnet will vary depending on the surface it is used on.
- The magnet's force might weaken over time. Check the strength of the magnet regularly for about one year. Move the device up and down and confirm the magnet strength.

When adequate ventilation is provided and the magnet is attached to the device, you can securely mount the device in the following locations:

- A metal wall or metal surface. Refer to Mounting the device on a metal surface or metal wall on page 32.
- Underneath a metal desktop. Refer to Mounting the device under a metal desk on page 34.

**Attaching the magnet sheet to the device**

Before mounting the device to a metal surface, place the logo side of the magnet sheet (displaying the Ruckus logo) squarely against the bottom panel of the device to attach the device to the magnet sheet.

**CAUTION**

The magnet sheet can only be placed against the bottom panel of the device. Do not attempt to attach the magnet sheet to any other panels on the device.

**CAUTION**

Before mounting the device using the magnet sheet, make sure the rubber feet are not installed on the device to ensure that the magnet sheet holds on to the device strongly and does not detach. If the rubber feet are already installed, remove them first before attaching the magnet sheet.
Mounting the device on a metal surface or metal wall

**CAUTION**

Do not mount the device on a surface with the top panel facing downward. Mount the device only on a vertical metal surface with the front panel port-side facing downward.

**CAUTION**

Ensure that the metal surface is flat and the texture is smooth to hold the device strongly. Check for other conditions that might impede secure magnetic mount.

Complete the following steps to securely mount a compact device on a metal surface or metal wall:

1. Ensure that the magnet sheet is attached to the bottom panel of the device. Refer to Attaching the magnet sheet to the device on page 31.
2. Place the magnet sheet (with the logo side now attached to the bottom panel of the device) against the metal surface or metal wall.

**FIGURE 16** Mounting a compact device to a metal surface using the magnet mount
Mounting the device under a metal desk

**NOTE**
Do not mount the device directly underneath a desktop surface with the top panel facing downward. Mount the device only on the vertical metal surface of the desk with the front panel ports side facing downward.

Complete the following steps to securely mount a compact device under a metal desktop:

1. Ensure that the magnet sheet is attached to the bottom panel of the device. Refer to Attaching the magnet sheet to the device on page 31.
2. Place the bottom panel of the device with the magnet sheet attached under the metal desk, against the side of the device. Ensure that the front panel (port side) of the device is facing downward.

**FIGURE 18 Mounting a compact device underneath a metal desktop using the magnet mount**
Mounting the compact device under a fixed surface

Use the following items to mount the device under a fixed surface such as under a desk, or under a shelf.

- #2 Phillips screwdriver
- Hammer
- Drill
- Mounting anchors
• Wall / under desk mount kit (ICX7000-C12-WMK - short brackets) or two-post rack mount kit (ICX7000-C12-RMK - long brackets)
• Mounting screws

**DANGER**
*When mounting the device under a fixed surface, under a desk, or under a shelf, mount the device with the bottom panel down and in a place where there is not much foot traffic. The fixed surface must be strong enough to withstand the weight of the device such that the device or the surface does not fall down.*

**CAUTION**
*When mounting the device under a fixed surface, under a desk, or under a shelf, use the long brackets to provide adequate ventilation and not exceed the operating temperature.*

**CAUTION**
*Do not install the device in an environment where the operating ambient temperature might exceed 35°C (95°F).*
Complete the following steps to mount the device under a fixed surface.

1. Using a Phillips screwdriver, attach the mounting brackets to the diagonally opposite sides of the device using two #6-32 sink-head screws on each side.

**FIGURE 20 Mounting a compact device under a fixed surface with short brackets (ICX7000-C12-WMK)**
2. Drill two holes under the fixed surface or desk where you want to mount the device.
3. Hammer the mounting anchors into the two holes.
4. With the bottom panel of the device facing down, use the #2 Phillips screwdriver to secure the two mounting screws into the mounting anchors.

**Figure 21** Mounting a compact device under a fixed surface with long brackets (ICX7000-C12-RMK)

**Mounting the compact device directly on a wall**

Use the following items to wall mount the device directly to a wall:

- #2 Phillips screwdriver
- Hammer
- Drill
- Wall mount anchors
- Wall mount screws
- Wall Mount Holes Location template
- Tape

**NOTE**
When mounting the device on a wall, mount the device with the port side down.
Mounting the Device
Mounting the compact device directly on a wall

Complete the following steps to mount the device directly to a wall.

1. Use tape to place the Wall Mount Holes Location template against the wall, in the same position that you plan to place the device against the wall. The Wall Mount Holes Location template serves as a guide to drilling the screws and wall-mount anchors into the correct location on the wall in order to place the device in the desired location.

2. Using the Wall Mount Holes Location template as a guide, drill two holes in the wall where you want to mount the device.

3. Hammer the wall-mount anchors into the two holes.
4. Use the #2 Phillips screwdriver to secure the two wall-mount screws into the wall-mount anchors. Leave a gap of 4.0 to 4.5 mm between the screw head and the wall.

**FIGURE 22 Preparing to wall mount the device**

- a. Drilled holes in wall
- b. Wall-mount anchors
- c. Wall-mount screws
- d. 4.0-4.5 mm space between screw head and wall
Mounting the Device
Mounting the compact device directly on a wall

5. With the port side of the device facing down, aim the mounting holes on the bottom panel of the device towards the wall-mounting screws on the wall and hang the device securely against the wall, so that the wall-mount screws are inserted into the mounting holes.

FIGURE 23 Wall mounting a compact device - View of rear panel
FIGURE 24 Wall mounting a compact device - View of the top panel

Mounting on a wall using the wall mount brackets

**NOTE**
You need a #2 Phillips screwdriver, a hammer, and a drill for wall mount installation.

**NOTE**
Mount the devices that have fans such that there is enough space for ventilation on the air-intake and air-exhaust sides to maintain the ambient operating temperature.
Mounting the Device
Mounting on a wall using the wall mount brackets

DANGER
This equipment is suitable for mounting on concrete or other noncombustible surfaces only.

NOTE
The hardware device illustrated in this procedure is only for reference and may not depict the actual device that you are installing.

Complete the following steps to mount the device to a wall.

1. Attach the four adhesive feet to the bottom of the device.
2. Using a Phillips screwdriver, attach the wall mount brackets to the sides of the device using four #6-32 sink-head screws on each side.

**FIGURE 25** Attaching the wall mount brackets to a 24-port device
3. Drill two holes on the wall where you want to mount the device.
4. Hammer two wall mount anchors into the holes on the wall.
5. Use the two wall mount screws to fasten the device to the wall mount anchors.

**FIGURE 27** Wall mounting a 24-port device with port-side up

1. Drilled holes
2. Wall mount anchors
3. Wall mount screws
Mounting the Device
Mounting on a two-post rack

FIGURE 28 Wall mounting a 48-port device with port-side down

NOTE
Ruckus recommends that you install the 24P, 48P, and 48PF models with the port-side down to maintain the ambient temperature.

Mounting on a two-post rack
The devices use stationary mounting when mounted in a rack.

DANGER
Make sure the rack housing the device is adequately secured to prevent it from becoming unstable or falling over.
CAUTION
Ensure that adequate ventilation and airflow is provided for the system. A 4.5 cm (1.77 in) clearance is recommended above and below the device and 8 cm (3.15 in) clearance is recommended on each side.

NOTE
You need a #2 Phillips screwdriver for rack mount installation.

NOTE
The ICX 7150-C12P compact device requires the ICX7000-C12-RMK rack mount kit which is optionally orderable.

Complete the following steps to mount devices in a rack.

1. Remove the rack mounting kit from the shipping carton. The kit contains two L-shaped mounting brackets and six sink-head screws.
2. Using a Phillips screwdriver, attach the mounting brackets to the sides of the device using six sink-head screws.

**FIGURE 29 Attaching the mounting brackets for a compact device**
3. Remove the two-post rack kit from the shipping carton. The kit contains four rack-mounting screws and four cage nuts.
4. Insert the cage nuts in the two-post rack where you want to mount the device.
5. Using a Phillips screwdriver, mount the device in a two-post rack using four rack-mounting screws.

**FIGURE 31 Installing a compact device in a two-post rack**

1. Rack-mounting screws
   2. Cage nuts
Installing a 24-port or 48-port device in a two-post rack

a. Rack-mounting screws
b. Cage nuts

6. If installing multiple devices, mount them in the rack, one below the other with the heaviest device at the bottom and lightest device on the top.

Installing the 1U, 1.5U, and 2U Universal Kit for Four Post Racks (XBR-R000295)

Use the following instructions to install a device in a 19-in. (48.3 cm) EIA rack using the 1U, 1.5U, and 2U Universal Kit for Four Post Racks (XBR-R000295).
Observe the following when mounting this device:

- The device can be installed so that the port side is either flush with the front posts or recessed with the non-port side flush with the rear posts. A recessed position allows a more gradual bend in the fiber-optic cables connected to the device and less interference in the aisle at the front of the rack.
- Use Electronic Industries Association (EIA) standard racks. Provide space in a 19-in. (48.3 cm) EIA rack, as required for the device, with a minimum distance of 24 in. (609.60 mm) and a maximum distance of 32 in. (812.80 mm) between the front and back posts.
- Two people are required to install the device in a rack. One person should hold the device, while the other while the other secures the device in the rack.
- Hardware devices illustrated in these procedures are only for reference and may not depict the device you are installing into the rack.

Time and items required

Allow 15 to 30 minutes to complete this procedure. Note the following requirements to ensure correct installation and operation.

The following items are required to install the device using the 1U, 1.5U, and 2U Universal Kit for Four-Post Racks:

- #2 Phillips torque screwdriver
- 1/4-inch slotted-blade torque screwdriver

Parts list

The following parts are provided with the 1U, 1.5U, and 2U Universal Kit for Four Post Racks Installation (XBR-R000295).
FIGURE 33 Rack kit parts

1. Front brackets (2)
2. Bracket extensions (2)
3. Rear brackets, short (2)
4. Rear brackets, medium (2)
5. Rear brackets, long (2)
6. Screw, 8-32 x 5/16-in., panhead Phillips (8)
7. Screw, 8-32 x 5/16-in., flathead Phillips (16)
8. Screw, 6-32 x 1/4-in., panhead Phillips (8)
9. Screw, 10-32 x 5/8-in., panhead Phillips (8)
10. Retainer nut, 10-32 (8)

Ensure that the items listed and illustrated are included in the kit. Note that not all parts may be used with certain installations depending on the device type.

CAUTION
Use the screws specified in the procedure. Using longer screws can damage the device.

Flush-front mounting the device in the rack

CAUTION
The device must be turned off and disconnected from the fabric during this procedure.
Mounting the Device
Flush-front mounting the device in the rack

NOTE
Illustrations in these rack installation procedures are for reference only and may not show the actual device that you are installing.

Complete the following tasks to install the device in a four-post rack:

1. Attaching the front brackets on page 56
2. Attaching the bracket extensions to the device on page 57
3. Installing the device in the rack on page 58
4. Attaching the rear brackets to the extensions on page 59
5. Attaching the rear brackets to the rack posts on page 61

Attaching the front brackets

Complete the following steps to attach the front brackets to the device.

1. Position the right front bracket with the flat side against the right side of the device at the front of the device, as shown in Figure 34.
2. Insert four 8-32 x 5/16-in. flathead screws through the vertically aligned holes in the bracket and then into the holes on the side of the device. Use the upper and lower screw holes, leaving the center holes empty.
3. Repeat Step 1 and Step 2 to attach the left front bracket to the left side of the device.
4. Tighten all the 8-32 x 5/16-in. screws to a torque of 15 in-lb (17 cm-kg).

**FIGURE 34 Attaching the front brackets**

**Attaching the bracket extensions to the device**

Complete the following steps to attach the extension brackets to the device.

1. Position the right bracket extension along the side of the device as shown in Figure 35.
2. Insert four 8-32 x 5/16-in. flathead screws through the vertically aligned holes in the bracket extension and then into the holes on the side of the device. Use the upper and lower screw holes, leaving the center holes empty.
3. Repeat step 1 and step 2 to attach the left bracket extension to the left side of the device.
4. Tighten all the 8-32 x 5/16-in. screws to a torque of 15 in-lb (17 cm-kg).

FIGURE 35 Attaching the bracket extensions to the device

Installing the device in the rack

Complete the following steps to install the device in the rack.

1. Position the device in the rack, as shown in Figure 36, providing temporary support under the device until the rail kit is secured to the rack.

2. Attach the right front bracket to the right front rack post using two 10-32 x 5/8-in. panhead screws and two retainer nuts. Use the upper and lower holes in the bracket.

3. Attach the left front bracket to the left front rack post using two 10-32 x 5/8-in. panhead screws and two retainer nuts. Use the upper and lower holes in the bracket.
4. Tighten all the 10-32 x 5/8-in. screws to a torque of 25 in-lb (29 cm-kg).

**FIGURE 36 Positioning the device in the rack**

---

**Attaching the rear brackets to the extensions**

Complete the following steps to attach the rear brackets to the extensions. There are short, medium, and long rear brackets that you can use for this step. Choose the correct bracket for the depth of your rack.

1. Select the proper length rear bracket for your rack depth.
2. Slide the right rear bracket onto the right extension, as shown in Figure 37.
   
   The short rear brackets are shown. Use the first and third vertical pairs of holes for the screws.
   
   Refer to Figure 38 for the positioning of the medium or long brackets and screws.
3. Attach the brackets using four 6-32 x 1/4-in. panhead screws.
4. Repeat Step 2 and Step 3 to attach the left rear bracket to the left extension.
Mounting the Device
Flush-front mounting the device in the rack

5. Adjust the brackets to the rack depth and tighten all the 6-32 x 1/4-in. screws to a torque of 9 in-lb (10 cm-kg).

**FIGURE 37** Attaching the short rear brackets to the extensions

**FIGURE 38** Attaching the medium or long rear brackets to the extensions

![Diagram showing medium or long rear brackets](image)
Attaching the rear brackets to the rack posts

Complete the following steps to attach the rear brackets to the rack posts.

1. Attach the right rear bracket to the right rear rack post using two 10-32 x 5/8-in. panhead screws and two retainer nuts, as shown in Figure 39. Use the upper and lower holes in the bracket.
2. Attach the left rear bracket to the left rear rack post using two 10-32 x 5/8-in. panhead screws and two retainer nuts. Use the upper and lower holes in the bracket.
3. Tighten all the 10-32 x 5/8-in. screws to a torque of 25 in-lb (29 cm-kg).

**FIGURE 39 Attaching the rear brackets to the rack posts**
Flush-rear (recessed) mounting the device in the rack

The flush-rear (recessed) mounting is similar to the flush-front mounting except that the brackets are reversed on the device.

**CAUTION**
The device must be turned off and disconnected from the fabric during this procedure.

**NOTE**
Illustrations used in these rack installation procedures are for reference only and may not show the actual device that you are installing.

Complete the following tasks to install the device in a four-post rack:

1. Attaching the front brackets to the rear of the device on page 62
2. Attaching the bracket extensions to the front of the device on page 63
3. Installing the device in the rack on page 64
4. Attaching the rear brackets to the bracket extensions at the front of the device on page 65
5. Attaching the rear brackets to the front rack posts on page 67

**Attaching the front brackets to the rear of the device**

**NOTE**
In this installation, the brackets are named as listed in the parts list even though the installation of the brackets is reversed from the flush-front installation.

Complete the following steps to attach the front brackets to the rear of the device.

1. Position the right front bracket with the flat side against the right rear side of the device, as shown in Figure 40.
2. Insert four 8-32 x 5/16-in. flathead screws through the vertically aligned holes in the bracket and then into the holes on the side of the device. Use the upper and lower screw holes, leaving the center holes empty.
3. Repeat Step 1 and Step 2 to attach the left front bracket to the left rear side of the device.
4. Tighten all the 8-32 x 5/16-in. screws to a torque of 15 in-lb (17 cm-kg).

**FIGURE 40 Attaching the front brackets to the rear of the device**

-- Diagram showing the positioning of components 1, 2, and 3.

1. Ruckus ICX device
2. Front brackets
3. Screws, 8-32 x 5/16-in., flathead Phillips

**Attaching the bracket extensions to the front of the device**

Complete the following steps to attach the bracket extensions to the front of the device.

1. Position the right bracket extension along the side of the device as shown in Figure 41.
2. Insert four 8-32 x 5/16-in. flathead screws through the vertically aligned holes in the bracket extension and then into the holes on the side of the device. Use the upper and lower screw holes, leaving the center holes empty.
3. Repeat step 1 and step 2 to attach the left front bracket extension to the left side of the device.
Mounting the Device
Flush-rear (recessed) mounting the device in the rack

4. Tighten all the 8-32 x 5/16-in. screws to a torque of 15 in-lb (17 cm-kg).

**FIGURE 41 Attaching the bracket extensions to the device**

1. Bracket extensions
2. Screws, 8-32 x 5/16-in., flathead Phillips

Installing the device in the rack

Complete the following steps to install the device in the rack.

1. Position the device in the rack, as shown in Figure 42, providing temporary support under the device until the rail kit is secured to the rack.
2. Attach the right front bracket to the right rear rack post using two 10-32 x 5/8-in. panhead screws and two retainer nuts. Use the upper and lower holes in the bracket.
3. Attach the left front bracket to the left rear rack post using two 10-32 x 5/8-in. panhead screws and two retainer nuts. Use the upper and lower holes in the bracket.
4. Tighten all the 10-32 x 5/8-in. screws to a torque of 25 in-lb (29 cm-kg).

**FIGURE 42 Positioning the device in the rack**

---

**Attaching the rear brackets to the bracket extensions at the front of the device**

Complete the following steps to attach the rear brackets to the bracket extensions. There are short, medium, and long front brackets that you can use for this step.

1. Select the proper length rear bracket for your rack depth.
2. Slide the right rear bracket onto the right extension, as shown in Figure 43.
   - The short rear brackets are shown. Use the first and third vertical pairs of holes for the screws.
   - Refer to Figure 44 for the positioning of the medium or long brackets and screws.
3. Attach the brackets using four 6-32 x 1/4-in. panhead screws.
4. Repeat Step 2 and Step 3 to attach the left rear bracket to the left extension.
5. Adjust the brackets to the rack depth and tighten all the 6-32 x 1/4-in. screws to a torque of 9 in-lb (10 cm-kg).

FIGURE 43 Attaching the short rear brackets to the extensions at the front of the device
Attaching the rear brackets to the front rack posts

Complete the following steps to attach the rear brackets to the front rack posts.

1. Attach the right rear bracket to the right front rack post using two 10-32 x 5/8-in. screws and two retainer nuts, as shown in Figure 45. Use the upper and lower holes in the bracket.

2. Attach the left rear bracket to the left front rack post using two 10-32 x 5/8-in. screws and two retainer nuts. Use the upper and lower holes in the bracket.
Mounting the Device
Flush-rear (recessed) mounting the device in the rack

3. Tighten all the 10-32 x 5/8-in. screws to a torque of 25 in-lb (29 cm-kg).

Connecting ICX 7150 Devices in a Stack

- Stacking configuration requirements
- ICX 7150 stacking ports
- ICX 7150 stacking topologies

Stacking configuration requirements

Before configuring a traditional stack using the CLI, physically connect the devices with stacking cables. For more information on configuring a stack, refer to the FastIron Stacking Configuration Guide.

ICX 7150 stacking ports

Depending on the model, up to four SFP+ ports on the front panel of the ICX 7150 device support stacking. The ports can also be used as uplink (data) ports. The following figures show the location and numbering for stacking ports. The numbering for the ports is in three-tuple format (x/y/z) and refers to StackID/Slot/Port.

ICX 7150-C12P devices have two stacking ports on the front panel as shown in the following figure.

**FIGURE 46 ICX 7150-C12P stacking ports**

ICX 7150-24 and ICX 7150-24P devices have four stacking ports on the front panel as shown in the following figure.
ICX 7150, ICX 7150-48, ICX 7150-48P, and ICX 7150-48PF devices have four stacking ports in the same location on the front panel as ICX 7150 24-port models.

The exception among 48-port models is the ICX 7150-48ZP, which has eight SPF+ ports on the front panel as shown in the following figure. Four of these ports, ports 1/2/1 through 1/2/4, can be used as stacking or data uplink ports. The remaining four, 1/2/5 through 1/2/8, can be used only as data uplink ports.
ICX 7150 stacking topologies

Both linear and ring topologies are supported in a traditional stack. In a linear stack topology, a connection between each switch carries two-way communications across the stack. The physical connection between the devices can use one port (stacked-port) or two ports (stacked-trunk) per trunk.

In ring stack topology, an extra connection between the logical first and last devices forms a "ring" or "closed-loop." The closed-loop connection provides a redundant path for the stack link, so if one link fails, stack communications can be maintained. You can connect stacking units using one port per trunk or both ports in a trunk. For maximum bandwidth and link redundancy, use both ports per trunk.

Linear and ring topologies are depicted for different ICX 7150 models in the following figures.

NOTE
Port numbers shown are specific to each physical unit; that is, the unit ID is 1, in the three-tuple StackID/slot/port notation. Assuming the stack in the following figure is numbered from the bottom when it is configured, the connected stacking port for the bottom stack (stack unit 1) would be identified as port 1/3/2, and the connected port in the middle stack unit (stack unit 2) would be identified as 2/3/1. Port 2/3/2 in the middle stack unit would be shown as connecting to port 3/3/1 in the top unit (stack unit 3).

NOTE
The Secure-setup utility used to discover and configure the stack assigns each unit a different stack ID. You can override the automatic selection if you choose. Refer to the Fastiron Stacking Configuration Guide for more information.

The following figures show examples of supported stacking topologies for the ICX 7150-C12P.

FIGURE 49 ICX 7150-C12P linear stack
Connecting ICX 7150 Devices in a Stack
ICX 7150 stacking topologies

**FIGURE 50** ICX 7150-C12P ring topology

The following figures show examples of supported topologies for ICX 7150 24-port models.

**FIGURE 51** ICX 7150 24-port model, linear stack
The following figures show examples of supported topologies for the ICX 7150-48ZP.

Initial Setup and Verification

- Items required............................................................................................................................................................. 75
- Providing power to the device................................................................................................................................... 75
- Establishing a first-time connection to the console port........................................................................................76
- Configuring an IP address for the device................................................................................................................. 79
- Customizing the host name and chassis name ...................................................................................................... 80
- Setting the date and time........................................................................................................................................... 80
- Establishing a connection to the out-of-band management port.........................................................................81
- Getting in-band access............................................................................................................................................... 81
- Verifying the correct operation..................................................................................................................................81
- Backing up the running configuration.................................................................................................................... 82

Items required

The following items are required for initial setup and verification of the device:

- The device, mounted and installed with the required power supply, fan assemblies, transceivers, and cables
- A workstation computer with a terminal emulator application installed, such as HyperTerminal for Windows
- An unused IP address with corresponding subnet mask and gateway address
- An USB console cable with Type-C connector (Type-C USB cable not included with the device)
- A serial console cable with an RJ-45 connector (RJ-45 console cable not included with the device)
- An Ethernet cable
- Access to a TFTP server or USB removable media for backing up (uploading) or downloading the device configuration (optional)

Providing power to the device

Perform the following steps to provide power to the device.

1. Remove the power cord and the power cord retainer clip from the shipping carton container.
2. Install the power cord retainer clip to the power supply inlet on the device.
3. Connect the power cord to the power supply inlet on the device. Ensure that the power cords have a minimum service loop of 6 inches available and are routed properly to avoid stress.
4. Insert the power cord plug to power sources on separate circuits if there is more than one power cord for a single device in order to protect against power failure.
5. If applicable, power on the power sources by flipping the switches to the on position. The SYST LED displays amber until power-on self-test (POST) is complete and then starts blinking green until the device is completely up. The device usually requires several minutes to boot and complete POST.

NOTE
Power is supplied to the device as soon as the first power supply is connected and turned on. If the power indicator does not turn on when the power cord is plugged in, you may have a problem with the power outlet, power cord, or internal power supply.
6. After POST is complete, verify that the switch power and switch status LEDs are green.

   **NOTE**
   Power Supply LED should always display solid green to ensure a working power supply. If the LED is amber, it indicates a faulty PSU.

   For more information about how to interpret POST, BOOT, and diagnostics tests, refer to Monitoring the Device on page 93.

---

**Establishing a first-time connection to the console port**

You can use either the USB Type-C console port or the RJ-45 serial console port to establish the first time connection to the device. The console port allows you to configure and manage the device using a third-party terminal emulation application from a workstation that is directly connected to the port using a standard USB Type-C cable or RJ-45 serial cable. Perform the following steps to log in to the device for the first time through the console connection.

1. Do one of the following:
   - Connect a standard USB cable to the USB Type-C console connector on the device and to a USB port on the workstation. To connect the USB Type-C console port on the device to a USB port on the workstation, you need a standard USB cable that has a USB Type-C connector on one end and a USB connector on the other end that matches the USB port on your workstation.
   - Connect a standard RJ-45 cable to the RJ-45 serial console connector on the device and to a USB port on the workstation. To connect the RJ-45 serial console port on the device to a USB port on the workstation, you need a standard RJ-45 cable that has a RJ-45 connector on one end and a USB connector on the other end that matches the USB port on your workstation.

2. Allow the workstation to automatically discover and configure the newly found USB device.

   **NOTE**
   If the workstation is unable to automatically discover and configure the newly found USB device, you can manually download the necessary device drivers for Windows, MacOS, and Linux from the following website: [https://support.ruckuswireless.com//](https://support.ruckuswireless.com/)

3. Open a terminal emulator application such as HyperTerminal on a Windows PC, or TERM, TIP, or Kermit in a UNIX environment, and configure the sessions parameters as follows:
   - In a Windows environment, use the following values:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baud: Bits per second</td>
<td>9600</td>
</tr>
<tr>
<td>Data bits</td>
<td>8</td>
</tr>
<tr>
<td>Parity</td>
<td>None</td>
</tr>
<tr>
<td>Stop bits</td>
<td>1</td>
</tr>
<tr>
<td>Parameter</td>
<td>Value</td>
</tr>
<tr>
<td>------------</td>
<td>-------</td>
</tr>
<tr>
<td>Flow control</td>
<td>None</td>
</tr>
</tbody>
</table>

**NOTE**

Flow control is not supported on the console connection when attached to a remote terminal and must be disabled on the customer-side remote terminal server in addition to the host-side clients.

- In a UNIX environment using TIP, enter the following string at the prompt:
  ```
tip /dev/ttyb -9600.
  ```
  If ttyb is already in use, use ttya instead and enter the following string at the prompt:
  ```
tip /dev/ttya -9600
  ```

4. When the terminal emulator application stops reporting information, press Enter to display the device prompt.

   Depending on the device you purchased, and the code (Layer 2 or Layer 3) loaded on your system, the device prompt is displayed accordingly.

   ```
device>
   ```

   When the device prompt is displayed, you are connected to the device. You can customize the prompt by changing the device name. If you do not see this prompt, make sure the cable is securely connected to your workstation and to the device and check the settings in your terminal emulation program. In addition to the previously configured session settings, make sure the terminal emulation session is running on the same serial port you attached to the device.

   The device CLI prompt has the following access levels:
   
   - **User EXEC**: This is the level you enter when you first start a CLI session. At this level, you can view some system information but you cannot configure system or port parameters.
   - **Privileged EXEC**: This level is also called the Enable level and can be secured by a password. You can perform tasks such as managing files on the flash module, saving the system configuration to flash, and clearing caches at this level.
   - **CONFIG**: The configuration level. This level allows you to configure the system IP address and configure switching and routing features. To access the CONFIG mode, you must already be logged in to the privileged EXEC level.
5. At the opening CLI prompt, enter the following command to change to the Privileged EXEC mode:

```bash
device> enable
device#
```

By default, the CLI is not protected by passwords. To secure CLI access, Ruckus strongly recommends assigning passwords. You can set the following levels of passwords:

- **Super User**: Allows complete read-and-write access to the system. This is generally for system administrators and is the only password level that allows you to configure other passwords.

  **NOTE**

  You must set a Super User password before you can set other types of passwords. You can also assign other passwords using Brocade Network Advisor after an enable password has been configured for a Super User on the device using the CLI.

- **Port Configuration**: Allows read-and-write access to specific ports but not for global (system-wide) parameters.

- **Read-Only**: Allows access to the privileged EXEC mode and CONFIG mode but only with read access.

  **NOTE**

  Passwords can be up to 32 characters long. They must begin with an alphabetic character. They can include numeric characters, the period (.), and the underscore (_) only. Passwords are case-sensitive, and they are not displayed when you enter them on the command line.

6. Access the configuration mode of the CLI by entering the following command:

```bash
device# configure terminal
device(config)#
```

7. Enter the following command to set the Super User password:

```bash
device(config)# enable super-user-password joe
```

  **NOTE**

  Make sure to write down the new passwords and keep the information in a secure location.

8. Enter the following commands to set the port configuration and read-only passwords.

```bash
device(config)# enable port-config-password john
device(config)# enable read-only-password sam
```

**Performing the factory reset**

Perform the following instructions to use the reset button to do a factory reset. This is applicable from R08.0.70 and later.

1. Remove power from the switch.
2. Press and hold the reset button and apply power to the switch.
3. Release the reset button after all of the system LEDs flash amber.

When all the system LEDs blink green, all the configuration data is being erased and the switch is returned to its factory configuration. When all the system LEDs are solid green, the erase process is complete and the system will reload. Once reloaded and the SYST LED is steady green the factory reset is complete.
Recovering from a lost password

If a password has been configured for the device but the password has been lost, you can regain Super User access to the device using the following procedure.

Recovery from a lost password requires direct access to the serial port and a system reset.

1. Start a CLI session over the serial interface to the Ruckus ICX device.
2. Reboot the device.
3. While the system is booting, before the initial system prompt appears, enter `b` to enter the boot monitor mode.
4. Enter `no password` (You cannot abbreviate this command.)
5. Enter `boot`. This command causes the device to bypass the system password check.
6. After the console prompt reappears, assign a new password.

Configuring an IP address for the device

You must configure at least one IP address using the serial connection to the CLI before you can manage the device using the other management interfaces. You can use the classical IP network masks (Class A, B, and C subnet masks, and so on) or Classless Interdomain Routing (CIDR) network prefix masks.

- To enter a classical IP network mask, enter the mask in IP address format. For example, enter "10.157.22.99 255.255.255.0" for an IP address with a Class C subnet mask.
- To enter a prefix number for a network mask, enter a forward slash (/) and the number of bits in the mask immediately after the IP address. For example, enter "10.157.22.99/24" for an IP address that has a network mask with 24 significant ("mask") bits.

1. At the opening CLI prompt, enter the following commands.

   ```
   device> enable
   device# erase startup-config
   device# configure terminal
   ```

   **NOTE**
   Use the `erase startup-config` command only for new systems. If you enter this command on a system you have already configured, the command erases the configuration. If you accidentally erase the configuration on a configured system, enter the `write memory` command to save the running configuration to the startup-config file.

2. Enter the following commands to assign an IP address for a device running Layer 2 software.

   ```
   device(config)# ip address 10.22.3.44 255.255.255.0
   device(config)# ip default-gateway 10.22.3.1
   device(config)# write memory
   ```

   **NOTE**
   You do not need to assign a default gateway address for single subnet networks.

   Enter the following commands to add an IP address and mask to a router port on a device running Layer 3 software.

   ```
   device(config)# interface ethernet 1
   device(config)# ip address 10.22.3.44 255.255.255.0
   device(config)# write memory
   ```
NOTE
Before attaching any equipment to a device running Layer 3 software, you must assign an interface IP address to the subnet on which the device will be located. You must use the serial connection to assign the first IP address. For subsequent addresses, you can use the CLI through Telnet.

3. Assign an interface IP address to the out-of-band management Ethernet port.

```
device(config)# interface management 1
device(config)# ip address 10.22.3.45 255.255.255.0
device(config)# write memory
```

The management port number is always 1.

Customizing the host name and chassis name

Changing the host name, contact, and location is important for distinguishing and identifying the device uniquely and for accurate tracking of logs and errors. The messages that appear in the log are labeled with the chassis name, which makes tracking the errors much easier. Specify an easily understandable and meaningful host name and chassis name.

Perform the following steps to change the host name and then the chassis name.

1. Customize the host name, contact, and location using the following commands. When you configure a host name, the name replaces the default system name in the device CLI prompt.

```
device(config)# hostname sj_device1
sj_device1(config)# snmp-server contact Support Services
sj_device1(config)# snmp-server location San Jose
sj_device1(config)# end
sj_device1# write memory
```

The name, contact, and location each can be up to 255 alphanumeric characters. The text strings can contain blanks. The SNMP text strings do not require quotation marks when they contain blanks but the host name does.

2. Change the chassis name by using the `chassis name` command.

```
device(config)# chassis name SJ001
sj_device1(config)# end
sj_device1# write memory
```

The `chassis name` command does not change the device CLI prompt. Instead, the command assigns an administrative ID to the device.

Setting the date and time

Use the following command to set the current date and time for the device.

```
device# clock set
hh:mm:ss   Current Time
device# clock set 10:05:45
mm-dd-yy/yyyy   Current Date
device# clock set 10:05:45 12-01-16
```

NOTE
After a power cycle the date and time settings are not retained as the device does not have an RTC battery.
Establishing a connection to the out-of-band management port

The out-of-band management interface is an RJ-45 Ethernet port that allows you to access, configure, and manage the device from the network. Perform the following steps to establish a connection to the device using the out-of-band Ethernet management port.

1. Remove the plug from the RJ-45 management port.
2. Connect an Ethernet cable to the device RJ-45 management port and to the workstation or to an Ethernet network containing the workstation.

**NOTE**
At this point, the device can be accessed remotely using the CLI or Brocade Network Advisor. Ensure that the device is not being modified from any other connections. The Ethernet management port also supports auto-MDI and auto-MDIX.

Getting in-band access

You can access the management agent in the device from anywhere within the attached network using Telnet or other network management software. However, you must first configure the device with a valid IP address, subnet mask, and default gateway. If you have trouble establishing a link to the management agent, check to see if you have a valid network connection. Then verify that you entered the correct IP address. Also, be sure the port through which you are connecting to the device has not been disabled. If it has not been disabled, then check the network cabling that runs between your remote location and the device.

Verifying the correct operation

Check the LEDs to verify operation of functional parts. The following commands can be useful to establish an operational baseline for the device. Refer to the *Ruckus FastIron Command Reference* for more information on these commands.

- `show chassis`
- `show version`
- `show cpu`
- `show flash`
- `show files`
- `show run`
- `show boot-preference`
- `show configuration`
- `show running-config`
- `show logging`
Initial Setup and Verification
Backing up the running configuration

**Backing up the running configuration**

Use the `write memory` command to replace the startup configuration with the running configuration every time you make changes to the device configuration. To back up the device configuration to an external TFTP server, use the `copy running-config tftp` command.

```
device# copy running-config tftp 2001:DB8:e0ff:7837::3 newrun.cfg
```

This command example copies the running configuration to a TFTP server with the IPv6 address of 2001:DB8:e0ff:7837::3 and names the file on the TFTP server `newrun.cfg`. 
Installing Transceivers and Cables

- Time and items required............................................................................................................................................ 83
- Precautions specific to transceivers and cables...................................................................................................... 84
- Managing cables..........................................................................................................................................................84
- Installing the Ethernet RJ-45 cables...........................................................................................................................85
- Cleaning the fiber-optic connectors..........................................................................................................................86
- Installing a new fiber-optic transceiver.....................................................................................................................86
- Cabling a fiber-optic transceiver................................................................................................................................87
- Replacing a fiber-optic transceiver............................................................................................................................88
- Long-reach multimode adaptor module........................................................................................................................89

Time and items required

The installation or replacement procedure for one transceiver takes less than five minutes. Ensure that the following items are available:

- Required number of compatible power cables
- Required number of supported Ruckus-branded transceivers

Refer to the Ruckus optics family datasheet for the list of supported transceivers and cables.

- Required number of compatible Ethernet (RJ-45) and fiber-optic cables
- Optical transceiver extraction tool (for 10-Gbps transceiver only)

**NOTE**
Most Ruckus switches come with a transceiver extraction tool and holster. The extraction tool is designed to remove transceivers from modules where the space is limited.

**FIGURE 55 Optical transceiver extraction tool**
Precautions specific to transceivers and cables

DANGER
The procedures in this manual are for qualified service personnel.

DANGER
For safety reasons, the ESD wrist strap should contain a series 1 megaohm resistor.

DANGER
All fiber-optic interfaces use Class 1 lasers.

DANGER
Use only optical transceivers that are qualified by Ruckus Wireless, Inc. and comply with the FDA Class 1 radiation performance requirements defined in 21 CFR Subchapter I, and with IEC 60825 and EN60825. Optical products that do not comply with these standards might emit light that is hazardous to the eyes.

CAUTION
Before plugging a cable into any port, be sure to discharge the voltage stored on the cable by touching the electrical contacts to ground surface.

Managing cables

Cables can be organized and managed in a variety of ways, for example, using cable channels on the sides of the rack or patch panels to minimize cable management. Follow these recommendations:

NOTE
You should not use tie wraps with optical cables because they are easily overtightened and can damage the optic fibers.

CAUTION
Before plugging a cable into any port, be sure to discharge the voltage stored on the cable by touching the electrical contacts to ground surface.

• The minimum bend radius for a 50 micron cable is 2 inches under full tensile load and 1.2 inches with no tensile load.
• Plan for rack space required for cable management before installing the switch.
• Leave at least 1 m (3.28 ft) of slack for each port cable. This provides room to remove and replace the switch, allows for inadvertent movement of the rack, and helps prevent the cables from being bent to less than the minimum bend radius.
• If you are using ISL Trunking, consider grouping cables by trunking groups. The cables used in trunking groups must meet specific requirements, as described in the Ruckus optics family datasheet.
• For easier maintenance, label the fiber-optic cables and record the devices to which they are connected.
• Keep LEDs visible by routing port cables and other cables away from the LEDs.
• Use hook and loop style straps to secure and organize fiber-optic cables.
Installing the Ethernet RJ-45 cables

The device supports connection to other vendors’ routers, switches, hubs, as well as other Ruckus devices through the appropriate ports, transceivers, and cables.

- For copper connections to Ethernet hubs, a 10/100Base-TX or 1000Base-T switch, or another Ruckus device, a crossover cable is required as shown in the following figure. If the hub is equipped with an uplink port, it requires a straight-through cable instead of a crossover cable. The 802.3ab standard (automatic MDI or MDIX detection) calls for automatic negotiation of the connection between two 1000Base-T ports. In this case, a straight-through cable may work just as well as a crossover cable.

FIGURE 56 UTP crossover cable

- Straight-through UTP cabling is required for direct UTP attachment to workstations, servers, or routers using network interface cards (NICs). Fiber-optic cabling is required for direct attachment to Gigabit NICs or switches and routers through fiber ports.
FIGURE 57 Straight-through cable

EIA/TIA 568B RJ-45 Wiring Standard
10/100BASE-TX Straight-through Cable

- All 10/100 and 1000 Mbps Ethernet copper ports on the devices support automatic Media Dependent Interface (auto-MDI) or automatic Media Dependent Interface Crossover (auto-MDIX) detection. Auto-MDI or auto-MDIX is enabled on all 10/100 and 1000 Mbps copper ports by default. For each port, you can disable auto-MDI or auto-MDIX, designate the port as an MDI port, or designate the port as an MDIX port.

Cleaning the fiber-optic connectors

To avoid problems with the connection between the fiber-optic transceiver (SFP+ or QSFP) and the fiber cable connectors, Ruckus strongly recommends cleaning both connectors each time you disconnect and reconnect them. Dust can accumulate on the connectors and cause problems such as reducing the optic launch power.

To clean the fiber cable connectors, Ruckus recommends using a fiber-optic reel-type cleaner. When not using an SFP+, or QSFP connector, make sure to keep the protective covering in place.

Installing a new fiber-optic transceiver

For direct attachment from the device to a Gigabit NIC, switch, or router, using a fiber-optic transceiver, you need fiber cabling with an LC connector. You can install a new fiber-optic transceiver in an SFP or SFP+ slot while the device is powered on and running. While installing a transceiver, wear an ESD wrist strap with a plug that can be inserted in the ESD connector on the device.

**DANGER**
*For safety reasons, the ESD wrist strap should contain a series 1 megohm resistor.*

**DANGER**
*All fiber-optic interfaces use Class 1 lasers.*
Perform the following steps to install a fiber-optic transceiver.

1. Put on the ESD wrist strap and ground yourself by attaching the clip end to a metal surface (such as an equipment rack) to act as ground.
2. Remove the new transceiver from the protective packaging.
3. Gently insert the transceiver into the slot until it clicks into place. Transceivers are keyed to prevent incorrect insertion.

**NOTE**
The location of the fiber-optic interface shown is for illustration purposes only. They may be in a slightly different location on the device you are using.

**FIGURE 58** Installing a transceiver

![Transceiver Installation](image)

a. Transceiver

**NOTE**
If a 1-Gbps optic transceiver is inserted, you must configure the port using the `speed-duplex 1000-full-master` command at the interface level.

Cabling a fiber-optic transceiver

Perform the following steps to cable a fiber-optic transceiver.

1. Remove the protective covering from the fiber-optic port connectors and store the covering for future use.

**NOTE**
Before cabling a fiber-optic transceiver, Ruckus strongly recommends cleaning the cable connectors and the port connectors.
2. Gently insert the cable connector (a tab on each connector should face upward) into the transceiver connector until the tabs lock into place.
3. Observe the link and active LEDs to determine if the network connections are functioning properly.

## Replacing a fiber-optic transceiver

You can replace a fiber-optic SFP+ transceiver while the device is powered on and running.

While replacing a fiber-optic module, be sure to wear an ESD wrist strap with a plug that can be inserted in the ESD connector on the device.

**DANGER**

*For safety reasons, the ESD wrist strap should contain a series 1 megaohm resistor.*

To replace a transceiver from an SFP+ slot, complete the following steps.

1. Put on the ESD wrist strap and ground yourself by attaching the clip end to a metal surface (such as an equipment rack).
2. Disconnect the cable connector from the port connector.
3. Unlock the transceiver by pulling the bail latch forward, away from the front panel of the module. This unlocks the module from the front panel.

**NOTE**

On 1000Base-SX ports, the bail latch is enclosed in a black sleeve, and on 1000Base-LX ports, the bail latch is enclosed in a blue sleeve.

**FIGURE 59 Unlocking the bail latch**

![Unlocking the bail latch](image)

a. Bail latch

**NOTE**

The bail latch may be attached to either the top or the bottom of the SFP transceiver.
4. Grasp the bail latch and pull the transceiver out of the port.

**FIGURE 60 Removing the fiber-optic module**

5. Store the transceiver in a safe, static-free place or in an anti-static bag.

6. If you are installing a new module or replacing a module, install the new module in the port.

**Long-reaching multimode adaptor module**

Ruckus ICX7150, ICX7250, and ICX7750 Ethernet switches require a long-Reach Multimode (LRM) adaptor module to support LRM optics connections.

The Ruckus LRM adaptor module has two 280 mm Twinax tails and two corresponding SFP+ sockets which operate independently. Power for each of the SFP+ sockets and for the adaptor is provided through the Twinax connections.

The LRM adaptor module requires FastIron software release 08.0.61 or later on the host Ruckus ICX switches. The LRM adaptor module is not field configurable, rather you can apply all configuration to the host switch port. Use the `show lrm-adapter ethernet` command to display the status of the LRM module.

**LRM module part numbers**

The LRM adaptor module is available in the models listed in the following table.

<table>
<thead>
<tr>
<th>TABLE 12 LRM module models</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model/Part number</td>
</tr>
<tr>
<td>10G-SFPP-LRM-1-ADP</td>
</tr>
<tr>
<td>10G-SFPP-LRM-2-ADP</td>
</tr>
<tr>
<td>RMK-LRM-ADP</td>
</tr>
</tbody>
</table>
The LRM adaptor module ships with either one or two LRM optics (10G-SFPP-LRM) depending on the model that you purchased.

**LRM adaptor module specifications**

- Compatible with SFP+ ports on the ICX7150, ICX7250, and ICX7750
- Two independent SFP+ sockets for LRM optics
- Two integrated Twinax cables for power and data connectivity to the host switch
- Each port can operate at either 1Gbps or 10Gbps

**LEDs**

On the LRM adaptor module, two LEDs indicate the power status and link status of each connection.
FIGURE 62 System and link LEDs

1. System LED
2. Link LEDs

TABLE 13 System and link status LEDs

<table>
<thead>
<tr>

<td>4</td>
<td>8</td>
</tr>
<tr>
<td>ICX7750-48F</td>
<td>6</td>
<td>12 (see the note below)</td>
</tr>
</tbody>
</table>

Note: On the ICX7750-48F, the connections must be distributed across the SFP+ ports as follows:

- Maximum three LRM modules on ports 1/1/1 to 1/1/32
- Maximum three LRM modules on ports 1/1/33 to 1/1/48
Unpacking the LRM adaptor module

When unpacking the LRM adaptor module, verify that the shipping carton has the items as listed below. Save the shipping carton and packaging in case you need to return the shipment.

- One LRM adaptor module
- One or two L-shaped mounting brackets (depending on the model purchased)
- One or two 10G-SFP-LRM optics (depending on the model purchased)
- China-RoHS Hazardous and Toxic Substance statement
Monitoring the Device

- Interpreting port-side LEDs
- Interpreting nonport-side LEDs
- Pinging an IP address
- Tracing a route
- Digital optical monitoring
- Monitoring power and cooling

Interpreting port-side LEDs

After you install the network cables, you can observe certain LEDs to determine if the network connections are functioning properly. The tables in this section outline the state of each LED, the status of the hardware, and any recommended action.

**FIGURE 63 Port-side LEDs of ICX 7150-C12P**

18. OOB Link status LED (left)
19. OOB Speed status LED (right)

**NOTE**
ICX 7150-24P has an additional PoE status mode LED (however not enabled currently).
**System LEDs**

This section describes the system LEDs.

**System status LED**

Refer to the following table to interpret the system status LED.

**TABLE 14 System status LED during normal operation**

<table>
<thead>
<tr>
<th>LED color</th>
<th>Status of hardware</th>
<th>Recommended action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>The device is not powered on.</td>
<td>None.</td>
</tr>
<tr>
<td>Flashing green</td>
<td>The device is initializing and running initial bootup tests.</td>
<td>None.</td>
</tr>
<tr>
<td>Steady green</td>
<td>The device is operating normally.</td>
<td>None.</td>
</tr>
<tr>
<td>Steady amber</td>
<td>The device is booting up or has stopped at the booting stage.</td>
<td>None.</td>
</tr>
<tr>
<td>Flashing amber</td>
<td>The device is the crash state or the watchdog timeout state.</td>
<td>None.</td>
</tr>
</tbody>
</table>
**Status mode LEDs**

You must press the status mode selection button to select the status mode to display the corresponding status on the individual port status LED. Pressing the button once shifts to the next mode in the following sequence:

1. Port link status mode (STAT) (default mode)
2. Port speed status mode (SPD)
3. Member ID status mode (ID)
4. USB status mode (USB)
5. PoE status mode

**NOTE**

When in USB mode, pressing the status mode selection button for more than 5 seconds initiates the copy files such as the image/manifest file, configuration file, and Show Tech (supportsave) from the device to the USB.

**Port status mode (STAT) LED**

The port status mode (STAT) LED displays the link status and activities of each port. Each unit within the stack will also display the local port status.

Refer to the following table to interpret the port status mode LED.

**TABLE 15 Port status mode (STAT) LED during normal operation**

<table>
<thead>
<tr>
<th>LED color</th>
<th>Status of hardware</th>
<th>Recommended action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>The port does not have a valid link.</td>
<td>None.</td>
</tr>
<tr>
<td>Steady green</td>
<td>The link is up and there is no traffic.</td>
<td>None.</td>
</tr>
<tr>
<td>Flashing green</td>
<td>The link is up and traffic/packets are transmitted or received.</td>
<td>None.</td>
</tr>
<tr>
<td>Steady amber</td>
<td>In Error or Out Error.</td>
<td>None.</td>
</tr>
<tr>
<td>Clear stats CLI</td>
<td>impacts the steady amber state, if no more error port moves out of the steady amber state.</td>
<td>None.</td>
</tr>
<tr>
<td>Flashing amber</td>
<td>UDLD/LACP Blocking/ERR-DIS.</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Port speed status mode (SPD) LED**

Port speed status (SPD) mode displays the speed setting of each downlink and uplink port (including modules).

Refer to the following table to interpret the port speed status mode LED.

**TABLE 16 Port speed status (SPD) LED during normal operation**

<table>
<thead>
<tr>
<th>LED color</th>
<th>Status of hardware</th>
<th>Recommended action</th>

<tr>
<td>Alternating amber and green</td>
<td>Fifth highest speed.</td>
<td>None.</td>
</tr>
</tbody>
</table>
Member ID status mode (ID) LED

The member ID status mode (ID) LEDs display the Stack ID or SPX PE ID.

Stack ID: If the switch is configured in traditional stacking mode, this LED will display the stack member ID of the unit within the stack.

- Member ID LED lights Green.
- Port LEDs are used to display the stack ID from 1 to 12 of each member within the stack.

SPX PE ID: If the switch is configured in SPX mode, this LED will display the PE ID.

- Member ID LED lights Green.
- Port LEDs are used to display the PE ID from 17 to 56+ of each PE member.
- Two port LEDs will be used to display the ID: Steady green for the first digit and steady amber for the second digit.
- For example, LED for port #2 will show steady green and port #7 will show steady amber for PE ID #27. LED for port #3 will show steady green for 2 sec follow by a steady amber for 2 sec and continue to alternate green amber for PE ID #33. LED for port #4 will show steady green and port #10 will show steady amber for PE ID #40.

Refer to the following table to interpret the member ID status mode LED.

### TABLE 17 Member ID status mode (ID) LED during normal operation

</tbody>
</table>

### Interpreting nonport-side LEDs

There are no LEDs found on the nonport-side view of the Ruckus ICX 7150 devices.
Pinging an IP address

To verify that a device can reach another device through the network, enter a command similar to the following at any level of the CLI.

```
device> ping 10.33.4.7
```

**NOTE**

If you address the ping to the IP broadcast address, the device lists the first four responses.

Tracing a route

To determine the path through which a device can reach another device, enter a command similar to the following at any level of the CLI on the device.

```
device> traceroute 10.33.4.7
```

The CLI displays trace route information for each hop as soon as the information is received. Traceroute requests display all responses to a given TTL. In addition, if there are multiple equal-cost routes to the destination, the device displays up to two responses by default.

Digital optical monitoring

You can configure your device to monitor optical transceivers in the system, either globally or by specified port. When digital optical monitoring is enabled, the system monitors the temperature and signal power levels for the optical transceivers in the specified ports. Console messages and syslog messages are sent when optical operating conditions fall below or rise above the SFP and SFP+ manufacturer's recommended thresholds. For more information about digital optical monitoring, refer to the *Ruckus FastIron Monitoring Configuration Guide*.

Monitoring power and cooling

If the unit powers off after running for a while, check for loose power connections, power losses or surges at the power outlet, and use the `show chassis` command to verify that the temperature is below the shutdown threshold. If you still cannot isolate the problem, then the internal power supply may be defective. In this case, contact Ruckus Technical Support for assistance.

The device contains temperature sensors that the software reads based on a configurable device poll time. The device has two automatic speed fan control settings based on the temperature. To protect the device from overheating, the following temperature threshold levels exist:

- The warning level is the temperature at which the device generates a syslog message. It is configurable up to 100°C (212°F).
- The shutdown level is the temperature at which the device reboots. It is set by the device and is not configurable. When the device temperature reaches the shutdown level, it generates a warning message that the device's temperature is over the shutdown level and the device shuts down in two minutes. The system restarts 120 seconds after the device reaches the temperature shutdown level.

The switch fans have two speeds, low and high. The fan speed settings are set by the device, and are not configurable. During system bootup, the fans run at high speed. After bootup, the fans operate at low speed when the temperature of the switch is below the high limit temperature that is specified in the following table. If the switch reaches the high limit temperature, the fans
operate at high speed until the switch reaches the low limit temperature specified in the table, at which time the fans decrease to low speed. If the switch reaches or exceeds the critical (shutdown) temperature for two minutes, the switch shuts down.

**NOTE**
In addition to the overall temperature of the device, the PoE-supported models monitor the temperature of the Power over Ethernet (PoE) power supply unit (PSU). When the low limit and high limit temperatures are reached, the PoE PSU fans change speed using the same algorithm as the module fans. There is no change to the Critical (shutdown) temperature value for these modules.

To display the temperature of a device, enter the `show chassis` command at any level of the CLI. The `show chassis` command displays the current temperature, the power supply status, and temperature threshold levels. The displayed temperature reflects the temperature of the board inside the device.

device# show chassis
The stack unit 1 chassis info:

Power supply 1 (AC - PoE) present, status ok
  Model Number: YM-1921AB06R
  Serial Number: SA000V171708000811

Long-reach multimode adaptor module

The Ruckus LRM adaptor module has two 280 mm Twinax tails and two corresponding SFP+ sockets which operate independently. Power for each of the SFP+ sockets and for the adaptor is provided through the Twinax connections.

The LRM adaptor module requires FastIron software release 08.0.61 or later on the host Ruckus ICX switches. The LRM adaptor module is not field configurable, rather you can apply all configuration to the host switch port. Use the `show lrm-adapter ethernet` command to display the status of the LRM module.

LRM module part numbers

The LRM adaptor module is available in the models listed in the following table.

<table>
<thead>
<tr>
<th>Model/Part number</th>
<th>Description</th>

</tr>
<tr>
<td>RMK-LRM-ADP</td>
<td>19-inch LRM Adapter Rack Mount Shelf Kit (supports 8 units).</td>
</tr>
</tbody>
</table>

FIGURE 66 LRM adaptor module

1. Port 1
2. Port 2
3. Passive cable (280 mm)
4. 10G LRM cages
5. Adaptor body

The LRM adaptor module ships with either one or two LRM optics (10G-SFPP-LRM) depending on the model that you purchased.

**LRM adaptor module specifications**

- Compatible with SFP+ ports on the ICX7150, ICX7250, and ICX7750
- Two independent SFP+ sockets for LRM optics
- Two integrated Twinax cables for power and data connectivity to the host switch
- Each port can operate at either 1Gbps or 10Gbps

**LEDs**

On the LRM adaptor module, two LEDs indicate the power status and link status of each connection.

**FIGURE 67 System and link LEDs**

</tbody>
</table>

Note: On the ICX7750-48F, the connections must be distributed across the SFP+ ports as follows:

- Maximum three LRM modules on ports 1/1/1 to 1/1/32
- Maximum three LRM modules on ports 1/1/33 to 1/1/48

Unpacking the LRM adaptor module

When unpacking the LRM adaptor module, verify that the shipping carton has the items as listed below. Save the shipping carton and packaging in case you need to return the shipment.

- One LRM adaptor module
- One or two L-shaped mounting bracket (depending on the model purchased)
- One or two 10G-SFPP-LRM optics (depending on the model purchased)
- China-RoHS Hazardous and Toxic Substance statement

CE statement

ATTENTION
This is a Class A product. In a domestic environment, this product might cause radio interference, and the user might be required to take corrective measures.

The standards compliance label on this device contains the CE mark which indicates that this system conforms to the provisions of the following European Council directives, laws, and standards:

- Electromagnetic Compatibility (EMC) Directive 2014/30/EU
- Low Voltage Directive (LVD) 2014/35/EU
- EN50322/EN5024 (European Immunity Requirements)
  - EN61000-3-2/JEIDA (European and Japanese Harmonics Spec)
  - EN61000-3-3

China ROHS

Refer to the latest revision of the China ROHS document (P/N 53-1000428-xx) which ships with the product.

BSMI statement (Taiwan)

警告使用者：
這是甲類的資訊產品，在居住的環境中使用時，可能會造成射頻干擾，
在這種情況下，使用者會被要求採取某些適當的對策。

Warning:
This is Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
Canadian requirements

This Class A digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations, ICES-003 Class A.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.
China CCC statement

Europe and Australia (CISPR 32 Class A Warning)

This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
FCC warning (US only)

This equipment has been tested and complies with the limits for a Class A computing device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instruction manual, might cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at the user’s own expense.

Germany statement

Machine noise information regulation - 3. GPSGV, the highest sound pressure level value is 70.0 dB(A) in accordance with EN ISO 7779.

Maschinenlärminformations-Verordnung - 3. GPSGV, der höchste Schalldruckpegel beträgt 70.0 dB(A) gemäss EN ISO 7779.

KCC statement (Republic of Korea)

クラスA機器 (放送通信機器)：この機器は、クラスA機器として、電波障害を引き起こすことがあります。使用者が適切な対策を講ずるよう要求されることがあります。VCCI-A

Class A device (Broadcasting Communication Device for Office Use): This device obtained EMC registration for office use (Class A), and may be used in places other than home. Sellers and/or users need to take note of this.

VCCI statement

This is a Class A product based on the standard of the Voluntary Control Council for Interference by Information Technology Equipment (VCCI). If this equipment is used in a domestic environment, radio disturbance might arise. When such trouble occurs, the user might be required to take corrective actions.

- Danger Notices .......................................................................................................................................................... 128

Cautions

A Caution statement alerts you to situations that can be potentially hazardous to you or cause damage to hardware, firmware, software, or data.

Ein Vorsichthinweis warnt Sie vor potenziellen Personengefahren oder Beschädigung der Hardware, Firmware, Software oder auch vor einem möglichen Datenverlust

Un message de mise en garde vous alerte sur des situations pouvant présenter un risque potentiel de dommages corporels ou de dommages matériels, logiciels ou de perte de données.

Un mensaje de precaución le alerta de situaciones que pueden resultar peligrosas para usted o causar daños en el hardware, el firmware, el software o los datos.

General cautions

CAUTION
Changes or modifications made to this device that are not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

| VORSICHT | Falls dieses Gerät verändert oder modifiziert wird, ohne die ausdrückliche Genehmigung der für die Einhaltung der Anforderungen verantwortlichen Partei einzuholen, kann dem Benutzer der weitere Betrieb des Gerätes untersagt werden. |
| MISE EN GARDE | Les éventuelles modifications apportées à cet équipement sans avoir été expressément approuvées par la partie responsable d'en évaluer la conformité sont susceptibles d'annuler le droit de l'utilisateur à utiliser cet équipement. |
| PRECAUCIÓN | Si se realizan cambios o modificaciones en este dispositivo sin la autorización expresa de la parte responsable del cumplimiento de las normas, la licencia del usuario para operar este equipo puede quedar anulada. |

CAUTION
Do not install the device in an environment where the operating ambient temperature might exceed 45°C (113°F).

| VORSICHT | Das Gerät darf nicht in einer Umgebung mit einer Umgebungsbetriebstemperatur von über 45°C (113°F) installiert werden. |
| MISE EN GARDE | N'installez pas le dispositif dans un environnement où la température d'exploitation ambiante risque de dépasser 45°C (113°F). |
| PRECAUCIÓN | No instale el instrumento en un entorno en el que la temperatura ambiente de operación pueda exceder los 45°C (113°F). |

CAUTION
Make sure the airflow around the front, and back of the device is not restricted.

<p>| VORSICHT | Stellen Sie sicher, dass an der Vorderseite, den Seiten und an der Rückseite der Luftstrom nicht behindert wird. |</p>

</thead>
<tbody>
<tr>
<td><strong>MISE EN GARDE</strong></td>
<td>Vérifiez que rien ne restreint la circulation d'air devant, derrière et sur les côtés du dispositif et qu'elle peut se faire librement.</td>
<td>Asegúrese de que el flujo de aire en las inmediaciones de las partes anterior, laterales y posterior del instrumento no esté restringido.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Never leave tools inside the chassis.</td>
<td></td>
</tr>
<tr>
<td>VORSICHT</td>
<td>Lassen Sie keine Werkzeuge im Chassis zurück.</td>
<td></td>
</tr>
<tr>
<td>MISE EN GARDE</td>
<td>Ne laissez jamais d'outils à l'intérieur du châssis</td>
<td></td>
</tr>
<tr>
<td>PRECAUCIÓN</td>
<td>No deje nunca herramientas en el interior del chasis.</td>
<td></td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>To protect the serial port from damage, keep the cover on the port when not in use.</td>
<td></td>
</tr>
<tr>
<td>VORSICHT</td>
<td>Um den seriellen Anschluss vor Beschädigungen zu schützen, sollten Sie die Abdeckung am Anschluss belassen, wenn er nicht verwendet wird.</td>
<td></td>
</tr>
<tr>
<td>MISE EN GARDE</td>
<td>Mettre le bouchon de protection sur le port série lorsqu'il ne sert pas pour éviter de l'endommager.</td>
<td></td>
</tr>
<tr>
<td>PRECAUCIÓN</td>
<td>Para evitar que se dañe el puerto serie, mantenga la cubierta colocada sobre el puerto cuando no lo utilice.</td>
<td></td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Before mounting the device using the magnet sheet, make sure the rubber feet are not installed on the device to ensure that the magnet sheet holds on to the device strongly and does not detach. If the rubber feet are already installed, remove them first before attaching the magnet sheet.</td>
<td></td>
</tr>
<tr>
<td>VORSICHT</td>
<td>Die Gummifuße sollten vor dem Anbringen des Geräts mittels der Magnetplatte noch nicht montiert sein. So stellen Sie sicher, dass die Magnetplatte fest am Gerät sitzt und sich nicht löst. Wenn die Gummifuße bereits montiert sind, entfernen Sie diese vor dem Anbringen der Magnetplatte.</td>
<td></td>
</tr>
<tr>
<td>MISE EN GARDE</td>
<td>Avant d'installer l'appareil en utilisant la feuille magnétique, assurez-vous que les pieds en caoutchouc ne sont pas installés sur l'appareil pour s'assurer que la feuille magnétique tient fermement sur l'appareil et ne se détache pas. Si les pieds en caoutchouc sont déjà installés, les enlever d'abord avant de fixer la feuille magnétique.</td>
<td></td>
</tr>
<tr>
<td>PRECAUCIÓN</td>
<td>Antes de montar el dispositivo mediante el uso la lámina magnética asegúrese de que las bases de goma no estén instaladas sobre el dispositivo para garantizar que la lámina magnética se adhiera al dispositivo con firmeza y no se desprenda. Si las bases de goma ya están instaladas, primero remuevalas antes de colocar la lámina magnética.</td>
<td></td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>The magnet sheet can only be placed against the bottom panel of the device. Do not attempt to attach the magnet sheet to any other panels on the device.</td>
<td></td>
</tr>
<tr>
<td>VORSICHT</td>
<td>Die magnetische Matte kann nur an der Unterseite des Geräts angebracht werden. Versuchen Sie nicht, die magnetische Matte an den anderen Seiten des Geräts anzubringen.</td>
<td></td>
</tr>
<tr>
<td>MISE EN GARDE</td>
<td>Il est uniquement possible de placer la feuille magnétique contre la face inférieure du dispositif. Ne tentez pas de placer la feuille magnétique à d'autres endroits.</td>
<td></td>
</tr>
<tr>
<td>PRECAUCIÓN</td>
<td>La hoja magnética solo se puede colocar sobre el panel inferior del dispositivo. No intente conectar la hoja magnética a ningún otro panel del dispositivo.</td>
<td></td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Do not mount the device on a surface with the top panel facing downward. Mount the device only on a vertical metal surface with the front panel port-side facing downward.</td>
<td></td>
</tr>
<tr>
<td>VORSICHT</td>
<td>Montieren Sie das Gerät nicht mit der Oberseite nach unten auf einer Oberfläche. Montieren Sie das Gerät nur mit der Vorderseite (portseitig) nach unten auf einer vertikalen Metalloberfläche.</td>
<td></td>
</tr>
</tbody>
</table>
**CAUTION**

Ensure that the metal surface is flat and the texture is smooth to hold the device strongly. Check for other conditions that might impede secure magnetic mount.

**Precaución**

Asegúrese de que la superficie metálica sea plana y de que la textura sea pareja para sostener el dispositivo con firmeza. Esté atento a otras condiciones que puedan impedir una instalación segura del montaje magnético.

**Electrical cautions**

**CAUTION**

Before plugging a cable into any port, be sure to discharge the voltage stored on the cable by touching the electrical contacts to ground surface.

**Precaución**

Antes de conectar un cable en cualquier puerto, asegúrese de descargar la tensión acumulada en el cable tocando la superficie de conexión a tierra con los contactos eléctricos.

**CAUTION**

Static electricity can damage the chassis and other electronic devices. To avoid damage, keep static-sensitive devices in their static-protective packages until you are ready to install them.

**Precaución**

La electricidad estática puede dañar el chasis y otros dispositivos electrónicos. A fin de impedir que se produzcan daños, conserve los dispositivos susceptibles de dañarse con la electricidad estática dentro de los paquetes protectores hasta que esté listo para instalarlos.
### Cautions and Danger Notices

#### Danger Notices

A Danger statement indicates conditions or situations that can be potentially lethal or extremely hazardous to you. Safety labels are also attached directly to products to warn of these conditions or situations.

Ein Gefahrenhinweis warnt vor Bedingungen oder Situationen die tödlich sein können oder Sie extrem gefährden können. Sicherheitsetiketten sind direkt auf den jeweiligen Produkten angebracht um vor diesen Bedingungen und Situationen zu warnen.

Un énoncé de danger indique des conditions ou des situations potentiellement mortelles ou extrêmement dangereuses. Des étiquettes de sécurité sont posées directement sur le produit et vous avertissent de ces conditions ou situations.

---

**CAUTION**

Do not use the port cover tabs to lift the module. They are not designed to support the weight of the module, which can fall and be damaged.

| VORSICHT       | Verwenden Sie nicht die Laschen der Anschlussabdeckungen um ein Modul anzuheben. Diese sind nicht auf das Gewicht des Moduls ausgelegt, welches herunterfallen und dabei beschädigt werden kann. |
| MISE EN GARDE | N'utilisez pas les languettes du bâti du port pour soulever le module. Elles ne sont pas conçues pour supporter le poids du module, qui peut tomber et être endommagé. |
| PRECAUCIÓN    | No utilice las pestañas de la tapa del puerto para levantar el módulo. No están diseñadas para soportar el peso del módulo, por lo que este podría caerse y resultar dañado. |

**CAUTION**

Use the screws specified in the procedure. Using longer screws can damage the device.

| VORSICHT       | Verwenden Sie die in der Anleitung aufgeführten Schrauben. Mit längeren Schrauben wird das Gerät möglicherweise beschädigt. |
| MISE EN GARDE | Utilisez les vis mentionnées dans les instructions. L'utilisation de vis plus longues peut endommager l'appareil. |
| PRECAUCIÓN    | Utilice los tornillos especificados en el procedimiento. Si utiliza tornillos de mayor longitud, podría dañar el dispositivo. |

**CAUTION**

Ensure that adequate ventilation is provided for the system. A 3 cm clearance is recommended above the device and 8 cm clearance is recommended on each side.

| VORSICHT       | Stellen Sie sicher, dass das System ausreichend belüftet wird. Über dem Gerät wird 3 cm Freiraum, auf beiden Seiten jeweils 8 cm Freiraum empfohlen. |
| MISE EN GARDE | Assurez-vous que le circuit est correctement ventilé. Il est recommandé de conserver un espace de 3 cm au-dessus du dispositif, et de 8 cm sur chaque côté. |
| PRECAUCIÓN    | Asegúrese de proporcionar una ventilación adecuada al sistema. Se recomienda dejar 3 cm de espacio libre por encima del dispositivo y 8 cm a cada lado. |

**CAUTION**

Ensure that adequate ventilation and airflow is provided for the system. A 4.5 cm (1.77 in) clearance is recommended above and below the device and 8 cm (3.15 in) clearance is recommended on each side.

| VORSICHT       | Achten Sie auf eine angemessene Belüftung und Luftzufuhr für das System. Ein Abstand von 4,5 cm über und unter dem Gerät und von 8 cm auf jeder Seite wird empfohlen. |
| MISE EN GARDE | Assurez-vous que le système est correctement ventilé. Un dégagement de 4,5 cm (1,77 po) est recommandé au-dessus et en dessous de l'appareil et un dégagement de 8 cm (3,15 po) est recommandé de chaque côté. |
| PRECAUCIÓN    | Asegure una ventilación y un flujo de aire adecuados para el sistema. Se recomienda una holgura de 4.5 cm (1.77 in) por encima y por debajo del dispositivo, y 8 cm (3.15 in) en cada lado. |
Una advertencia de peligro indica condiciones o situaciones que pueden resultar potencialmente letales o extremadamente peligrosas. También habrá etiquetas de seguridad pegadas directamente sobre los productos para advertir de estas condiciones o situaciones.

### General dangers

<table>
<thead>
<tr>
<th>DANGER</th>
<th>The procedures in this manual are for qualified service personnel.</th>

- **DANGER**
  - *Be careful not to accidently insert your fingers into the fan tray while removing it from the chassis. The fan may still be spinning at a high speed.*

- **DANGER**
  - *This equipment is suitable for mounting on concrete or other noncombustible surfaces only.*

### Electrical dangers

- **DANGER**
  - *For safety reasons, the ESD wrist strap should contain a series 1 megaohm resistor.*

- **DANGER**
  - *Make sure that the power source circuits are properly grounded.*

| GEFAHR | Aus Sicherheitsgründen sollte ein EGB-Armband zum Schutz von elektronischen gefährdeten Bauelementen mit einem 1 Megaohm-Reihenwiderstand ausgestattet sein. |
| DANGER | Pour des raisons de sécurité, la dragonne ESD doit contenir une résistance de série 1 méga ohm. |
| PELIGRO | Por razones de seguridad, la correa de muñeca ESD deberá contener un resistor en serie de 1 mega ohmio. |

| GEFAHR | Achten Sie darauf, dass die Stromquellen-Schaltkreise ordnungsgemäß geerdet sind. |
| DANGER | Assurez-vous que les circuits de la source d'alimentation soient équipés de mise à la terre. |
| PELIGRO | Asegúrese que los circuitos de la fuente de energía cuenten con una conexión a tierra apropiada. |
**DANGER**

_This device might have more than one power cord. To reduce the risk of electric shock, disconnect all power cords before servicing._

DANGER

If the installation requires a different power cord than the one supplied with the device, make sure you use a power cord displaying the mark of the safety agency that defines the regulations for power cords in your country. The mark is your assurance that the power cord can be used safely with the device.

GEFAHR
Falls für die Installation ein anderes Stromkabel erforderlich ist (wenn das mit dem Gerät gelieferte Kabel nicht passt), müssen Sie sicherstellen, dass Sie ein Stromkabel mit dem Siegel einer Sicherheitsbehörde verwenden, die für die Zertifizierung von Stromkabeln in Ihrem Land zuständig ist. Das Siegel ist Ihre Garantie, dass das Stromkabel sicher mit Ihrem Gerät verwendet werden kann.

DANGER
Si l’installation nécessite un cordon d’alimentation autre que celui fourni avec le dispositif, assurez-vous d’utiliser un cordon d’alimentation portant la marque de l’organisation responsable de la sécurité qui définit les normes et régulations pour les cordons d’alimentation dans votre pays. Cette marque vous assure que vous pouvez utiliser le cordon d’alimentation avec le dispositif en toute sécurité.

PELIGRO
Si la instalación requiere un cordón de corriente distinto al que se ha suministrado con el instrumento, verifique que usa un cordón de corriente que venga con la marca de la agencia de seguridad que defina las regulaciones para cordones de corriente en su país. Esta marca será su garantía de que el cordón de corriente puede ser utilizado con seguridad con el instrumento.

Dangers related to equipment weight

DANGER
Make sure the rack housing the device is adequately secured to prevent it from becoming unstable or falling over.

GEFAHR
Stellen Sie sicher, dass das Gestell für die Unterbringung des Geräts auf angemessene Weise gesichert ist, so dass das Gestell oder der Schrank nicht wackeln oder umfallen kann.

DANGER
Vérifiez que le bâti abritant le dispositif est bien fixé afin qu’il ne devienne pas instable ou qu’il ne risque pas de tomber.

PELIGRO
Verifique que el bastidor que alberga el instrumento está asegurado correctamente para evitar que pueda hacerse inestable o que caiga.

DANGER
Use safe lifting practices when moving the product.

GEFAHR
Beim Bewegen des Produktes ist auf eine sichere Hubtechnik zu achten.

DANGER
Utiliser des techniques de levage sûres pour déplacer le produit.

PELIGRO
Tenga mucho cuidado al levantar el producto para moverlo

DANGER
Mount the devices you install in a rack as low as possible. Place the heaviest device at the bottom and progressively place lighter devices above.

GEFAHR
Montieren Sie die Geräte im Gestell so tief wie möglich. Platzieren Sie das schwerste Gerät ganz unten, während leichtere Geräte je nach Gewicht (je schwerer desto tiefer) darüber untergebracht werden.

DANGER
Montez les dispositifs que vous installez dans un bâti aussi bas que possible. Placez le dispositif le plus lourd en bas et le plus léger en haut, en plaçant tous les dispositifs progressivement de bas en haut du plus lourd au plus léger.

PELIGRO
Monte los instrumentos que instale en un bastidor lo más bajos posible. Ponga el instrumento más pesado en la parte inferior y los instrumentos progresivamente más livianos más arriba.
### DANGER

**When mounting the device under a fixed surface, under a desk, or under a shelf, mount the device with the bottom panel down and in a place where there is not much foot traffic. The fixed surface must be strong enough to withstand the weight of the device such that the device or the surface does not fall down.**
